

What is claimed is:

1. A method of applying a grooved lineal to the edge portion of a glass unit in the formation of a window component, said method comprising the steps of:

(a) applying a triggerable sealant to the groove of the lineal;

(b) urging the edge portion of the glass unit into the groove; and

(c) triggering the sealant to form a seal between the groove and the edge portion of the glass unit.

2. A method of applying a grooved lineal to the edge portion of a glass unit as claimed in claim 1 and where in step (a) the triggerable sealant is applied to at least one wall of the groove.

3. A method of applying a grooved lineal to the edge portion of a glass unit as claimed in claim 2 and wherein the triggerable sealant is applied to both walls of the groove.
